

LIGHT GUARDS

FOR THE ULTIMATE PROTECTION!

Smart Fabrication can provide you with a **cost effective solution** to the expense of continually replacing those expensive flashing lights. For less than the cost of a single light, our sturdy Light Guards can prevent that so easily caused damage.

The Light Guards can be supplied with or without a base to suit your purpose. They can be **easily mounted** directly to the roof of the machine or with a base mounted on flat bar, so it can be simply bent back into position after any contact that would normally break the light. The Light Guards are made of **quality steel products** and are large enough to fit comfortably over most lights. They can also be altered if required to suit individual needs.

We are also able to custom fabricate & supply **rock & vandal guards, camera guards, water trucks, toolboxes, drag boxes** as well as **repair buckets & supply/repair cutting edges**. Please call us on: **(08) 8359 4442** and talk to us about your steel fabrication and excavation needs.
